SUMMARY

Conscio - Attention & Error Detection Assessment

Conscio is a game based assessment that measures mental agility, focus, concentration, divided attention, avoiding distraction, detecting errors etc of an individual. Candidates who score well in Conscio are likely to have reduced accidents, improved productivity, heightened focus, less distraction etc. at the work place.

Score Details

Error Detection

This scale measures the candidate's ability to detect errors among a series of information. This ability influences the capacity to identify flaws in the work flow in a highly repetitive work environment. Those who score high tend to have high levels of error detection ability.

63
Percentile

Focus & Divided Attention

This scale measures the candidate's ability to stay focused on multiple information stimuli and their ability to divide their attention between those information. These abilities influence the capacity to work fast and focused on repetitive tasks. Those who score high tend to have high levels of concentration and produce quality work repeatedly.
