## Sample\_Job

### SUMMARY

#### Sequenzo - Inductive Reasoning

Sequenzo is a game based assessment that measures an individual's cognitive ability to identify the data patterns. Those who score high tend to be work faster at problem diagnosis and prognosis. Those who score low need more time to validate their results and may at times get discouraged by the inductive reasoning requirements.

### Score Details

#### Three Rule Inductive Reasoning

This scale measures the candidate's ability to identify three complex rules of logic and predict the future series of the logic. Those who score high can handle complex data manipulation with ease.

**75**  
Percentile

#### Two Rule Inductive Reasoning

This scale measures the candidate's ability to identify two separate rules of logic and predict the future series of the logic. Those who score high can discern simple changes in data patterns.
